

NYAG4355™

Product Description and Application:

- NYAG4355 phosphor is yttrium aluminum garnet based YAG phosphor designed for white illumination devices.
- High efficiency of white is achieved using the wavelength of blue LED chips ranging from 455nm to 470nm. It can be used in combination with other color phosphor products.
- High brightness white LEDs using this phosphor can be used for applications in display backlighting, camera flashes, signage, decoration, LED displays, projectors, automotive, general lighting, and a variety of high power applications.

Emission Spectrum

Particle Size Distribution

Material Specifications:

Materials	Ce doped YAG
Density	4.8 g/cm ³
Particle Size	D50 (V) ~ 5-17µm
CIE (1931)	x=0.426, y=0.548
Emission Peak	551nm
Excitation Range	430nm to 490nm

* This data is sample data from an Engineering Sample and is for reference only.
