

DATASHEET

Y4254

Product Description and Application:

- Y4254 silicate phosphor is designed for low to mid-power white illumination.
- It can be used in combination with other Y series products for color tuning and to achieve a broader emission spectrum. Y4254 can be excited by a wide range of wavelengths from blue to near UV enabling use of high efficiency LED chips (440nm to 450nm).
- Y4254 can be used for high brightness white LEDs in mobile display backlighting, general and task lighting, camera flash, signage, decoration, and automotive applications.

Material Specifications:

Materials	<i>Eu doped Silicates</i>
Density	<i>4.7 g/cm³</i>
Particle Size	<i>D50V ~ 15µm</i>
CIE (1931)	<i>x=0.424, y=0.547</i>
Emission Peak	<i>558nm</i>
Excitation Range	<i>200nm to 490nm</i>
